ROSS

Introduction

This booklet contains the nutritional recommendations for the Ross® PM3 Parent Stock and is to be used with the Ross Parent Stock Management Handbook and the Ross PM3 Parent Stock Performance Objectives.

Performance

To achieve optimal reproductive performance, it is important that the body weight profiles recommended in the Ross PM3 Parent Stock Performance Objectives are followed. For the nutritional recommendations that follow, nutrient specifications presented have been based upon daily energy allocations that enable body weight profiles to be achieved.

The feed specifications in this booklet are for floor kept birds based on a 4-stage rearing programme which is applicable for situations where a lower nutrient density and a higher feed volume feeding strategy is required and a two stage breeder diet.

Please note these nutrient recommendations are based on the specified energy levels. Adjustment of nutrient levels must be made to reflect the feeding of different energy levels. Feed allocation should be determined by body weight and egg production levels, and therefore altered to maintain the recommended weight and egg production profiles.

It may be beneficial to use a separate male diet during the production period. A specification for a male diet is provided in this booklet.

For further information regarding these recommendations or for more specialised situations and advice on local markets please contact your Aviagen Nutritionist or Technical Service Manager.

Digest¹ = Digestible

* Energy base value. Nutrients should be factored accordingly when feeding differing energy values.

** A breeder 2 can be useful to help control egg size and improve shell quality.

NOTES

These feed specifications should be used as a guide. They may require adjustment for local conditions, legislation and markets.

Female Parent Stock Nutrient Allocations at Peak Production

| Nutrient | Nutrient Allocation at Peak |
|-------------------------------|-----------------------------|
| Energy (kcal/bird/day) | 415 |
| DIGESTIBLE AMINO ACIDS | |
| mg/bird/day | |
| Lysine | 904 |
| Methionine + Cystine | 784 |
| Methionine | 512 |
| Threonine | 708 |
| Valine | 784 |
| Isoleucine | 738 |
| Arginine | 1160 |
| Tryptophan | 211 |
| Leucine | 1311 |
| MINERALS | |
| mg/bird/day | |
| Calcium | 4958 |
| Available Phosphorus | 573 |

NOTES

These feed specifications should be used as a guide. They may require adjustment for local conditions, legislation and markets.

These nutrient allocations at peak are based on feeding 148g (32.6 lb/100 birds/day) of a 2800 kcal ME/kg (1270 kcal ME/lb) diet.

Male Parent Stock Nutrient Specifications

Feed allocation will be determined by male body weight and condition.
The male diet should be introduced when birds are moved to the laying house or at light stimulation.

| | | Male Feed | |
|------------------------------------|------|-------------------------|---------------------------|
| Energy per kg | kcal | 2750 | |
